

eStylez Mercury for Sage's®e-Business Manager adds enhanced functionality and faster search capabilities while maintaining the integration with the MAS 90® and MAS 200® accounting systems.

You might be asking how we speed up the search capabilities of e-Business Manager. Our enhanced search solution utilizes the power of Microsoft SQL Server® and combines it with the power the latest version of ASP.NET® technology to create our **RapidSearch**.

Our RapidSearch technology gives e-Business users the power to search item numbers, internet descriptions, and extended descriptions as well as User Defined Fields or other fields in Inventory on one or more keywords in a matter of seconds. Search results can be displayed in the standard e-Business format of a single column of items or in a grid layout of 3 or 4 columns.

This RapidSearch technology has been tested on data sets exceeding 65,000 items with search results resulting in hundreds of items in approximately .02 seconds.

If you have a large inventory or require complex searching functionality for your e-commerce solution, consider eStylez Mercury.
