

eStylez Recommended Items

MAS 90 & MAS 200

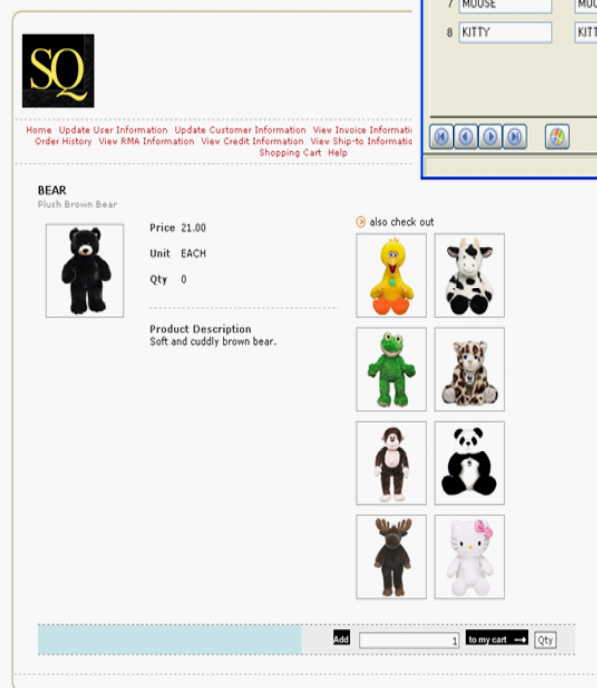

With eStylez Recommended Items for Sage Software® e-Business Manager® you can display up to eight related products or items on each item page. Users can then click on the related item links and jump directly to those item detail pages without the pain of navigating through categories or search results.

Often you may have items that go with well with other inventory items that you sell. Maybe you sell printers but you also sell black and color ink, printer cables, USB cables and glossy paper.

You want to let you customers know that you sell these others items but are worried that once they find the printer they will check out without browsing the

rest of your website, right?

With eStylez Recommended Items you can list up to eight recommended items in the form of thumbnail links on an item

detail page. So on the page for the printer, you could have thumbnails of a printer cable, USB cable and paper.

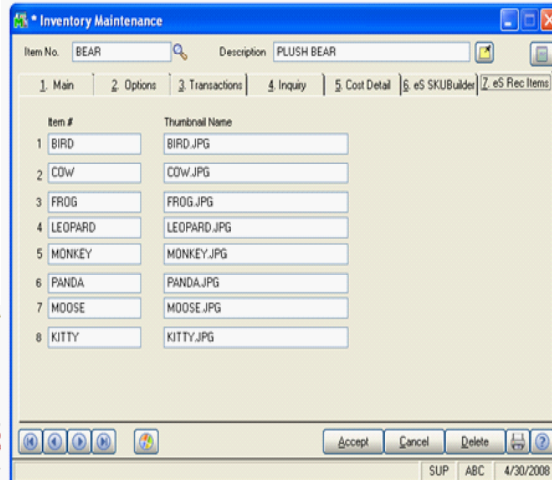

When customers are shopping on your website you have a captive audience.

Why not let them know what you carry and make the most out of each visit to your website?

Each thumb-

nailed is linked to the actual inventory item on your website so there is no need for users to search for the item, the link will take them right to it.

eStylez Recommended Items is not based on MS SQL Server® like some of our other eStylez technologies. If you are running standard e-Business Manager and have the Custom Office Module you can implement eStylez Recommended Items on your website today.
